  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## Project description

---

- inspired by findings from a longitudinal study of cross-linguistic influence in third language phonetics, phonology and syntax in L1 Polish, L2 English, and L3 Norwegian
  - gradient acceptability in L1 of two syntactic constructions under investigation
  - potential correlation between multilingualism and increased acceptance for marked / ungrammatical constructions in L1
-

## Aims

---

- investigation of the role of multilingual status and age in the processing of markedness and ungrammaticality in L1
  - why multilingualism and age?
    - **multilingualism** – based on results of the longitudinal study and previous literature on its influence of ungrammatical constructions in L1
    - **age** – based on informal observations about the over-exposure of younger generations to social media and their loose treatment of grammar rules
-

- 
1. Project description
  2. **Gradient acceptability**
  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## What are gradient judgments?

---

- **gradient (acceptability) judgments** – characterize constructions which are partially acceptable within a given population of speakers
  - sources of gradience:
    - language-internal perspective
    - language-external perspective (aka language attitudes) – language attitudes of speakers, usually resulting from the interaction among a number of (often) unrelated factors
  - gradient acceptability judgments – result of the interaction between language-internal and language-external factors
-

# Language-internal perspective

---

- language-internal sources of gradience (Francis, 2022):
  - syntactic
  - semantic / pragmatic
  - processing-based

1. Project description
  2. Gradient acceptability
  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## Constructions under investigation

---

1. distribution of **subject-oriented (SO) reflexive possessive / possessive pronouns**
2. (pre- vs. post-verbal) position of **adverbs of frequency**

## Construction 1: SO reflexive possessive / possessive pronouns

---

Prescriptively speaking, only the reflexive possessive may be subject-oriented in Polish (a); the SO possessive pronoun is considered ungrammatical, but it is still grammatical when it takes a non-subject antecedent (e.g. an object), as in (b):

(a) Jan znalazł swoje / jego klucze.  
Jan found self's his keys

(b) Jan dał Markowi swoje / jego klucze.  
Jan gave Mark self's his keys

---

## Construction 1: SO reflexive possessive / possessive pronouns

---

- possessive pronoun at least partially acceptable among native speakers of Polish (some speakers accept both pronominal forms):

(a) Jan znalazł swoje / ?jego klucze.  
Jan found self's his keys

- SO possessives – semantic / pragmatic violation (using them often creates an ambiguous context)
-

## Construction 2: Position of adverbs of frequency

---

- default pre-verbal position of adverbs of frequency in Polish

(a) Jan **rzadko** czyta e-booki.  
Jan rarely reads e-books.

- post-verbal position of adverbs also acceptable, although less frequent (thus marked):

(b) Jan czyta **%rzadko** e-booki.  
Jan reads rarely e-books.

- marked status of (b) – non-canonical syntactic configuration
-

- 
1. Project description
  2. Gradient acceptability
  3. Constructions under investigation
  - 4. Language attitudes**
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## Language attitudes

---

Polish has a deeply rooted tradition of normative studies. Prescriptivist attitudes to Polish are enforced via (among others):

- regulatory body shaping language policies (the Polish Language Council)
  - well-known authorities on proper language use
  - kultura języka ('proper language use') – branch of Polish language studies concerned with cultivating the linguistic awareness of speakers
-

## Language attitudes

---

Modern-time challenges to deep-seated prescriptive sentiments:

- social media (and many other informal websites) – dominant role both as a source of entertainment and information among younger generations of speakers (=> thus age can constitute a potential divide between the more conservative and more liberal language attitudes)
  - substantial increase in the level of bi- and multilingualism (bi-/multilingualism as a potential agent of change in language)
-

## The role of bi- / multilingualism

---

- grammatical attrition “appears to consist in fluctuation between L1-based and L2-based grammatical options” in the context of bilingualism (Hicks & Domínguez 2020: 16)
  - “increased optionality” in the context of bilingualism (Sorace, 2019)
  - “the knowledge of multiple languages and the experience of having to survive in a foreign language and culture make individuals more tolerant of ambiguity” (Dewaele & Li, 2013: 238)
-

  6. Methods
  7. Results
  8. Discussion
-

## Research questions

---

1. Do **multilingual status** and / or **age** affect the processing of **ungrammaticality and markedness** among L1 speakers of Polish?
  2. Are **multilingual status** and / or **age** correlated with less prescriptively-oriented attitudes towards language?
-

  2. Gradient acceptability
  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. **Methods**
  7. Results
  8. Discussion
-

## Participants

---

		 
	<p>N = 31</p> <p><math>M_{\text{English score}} = 12.03/25</math></p> <p><math>M_{\text{age}} = 18.94</math></p>	<p>N = 23</p> <p><math>M_{\text{English score}} = 18.24/25</math></p> <p><math>M_{\text{age}} = 19.87</math></p>
	<p>N = 26</p> <p><math>M_{\text{English score}} = -</math></p> <p><math>M_{\text{age}} = 66.67</math></p>	<p>N = 25</p> <p><math>M_{\text{English score}} = 16.76/25</math></p> <p><math>M_{\text{age}} = 48.80</math></p>

---

## Study design

---

- acceptability judgement task (Does this sentence sound good?)
  - 5-point Likert scale (1 – definitely not; 5 – definitely yes)
  - written presentation of items in an online questionnaire
  - 10 sentences with SO pronouns (5 grammatical + 5 ungrammatical)
  - 10 sentences with adverb placement (5 grammatical + 5 marked)
-

## Stimuli – SO pronouns

---

- introductory sentence  
Paweł i jego współpracownika Helena zarobili na giełdzie sporo pieniędzy.  
'Peter and his business partner Helen made a lot of money on the stock exchange'
  - target sentence  
Paweł<sub>1</sub> wydał **swoje**<sub>1</sub> pieniądze na nowy samochód.  
vs.  
\*Paweł<sub>1</sub> wydał **jego**<sub>1</sub> pieniądze na nowy samochód.  
'Peter spent his money on a new car'
-

## Stimuli – adverb placement

---

- introductory sentence  
Większość pracowników dojeżdża do pracy pociągiem  
'The majority of employees commute by train'
  - target sentence  
Ale Stanisław **rzadko jeździ** pociągiem.  
vs.  
%Ale Stanisław **jeździ rzadko** pociągiem.  
'But Steven **seldom takes / takes seldom** the train.'
-

  2. Gradient acceptability
  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## Descriptive statistics

---

	adverb placement	SO pronouns
grammatical	M = 3.52 (SD = 1.45)	M = 4.37 (SD = 1.06)
ungrammatical / marked	M = 3.15 (SD = 1.39)	M = 2.79 (SD = 1.55)

---

## Differences in ratings between grammatical and ungrammatical/marked sentences

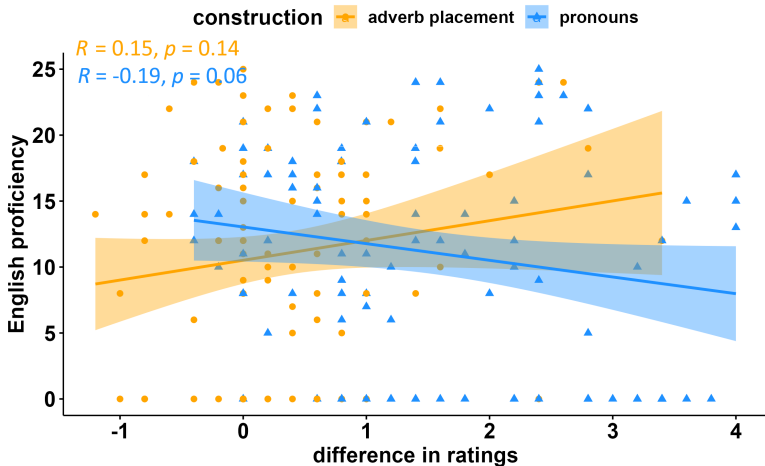

# Correlation between differences in ratings and age

# Correlation between differences in ratings and English proficiency

## SO pronouns – modelling

---

- mixed effects ordinal logistic regression model
  - $\text{rating} \sim \text{grammaticality} + \text{grammaticality} : \text{age} + \text{grammaticality} : \text{english\_proficiency} + (1 | \text{participant}) + (1 | \text{sentence})$
  - main effect of grammaticality ( $p < .001$ )
  - interaction between grammatical condition and age ( $p = .001$ ) and English proficiency ( $p = .035$ )
  - interaction between ungrammatical condition and age ( $p < .001$ )
-

## SO pronouns – modelling

grammaticality: — grammatical, — ungrammatical

## Adverb placement – modelling

---

- mixed effects ordinal logistic regression model
  - $\text{rating} \sim \text{grammaticality} + \text{grammaticality} : \text{age} + \text{grammaticality} : \text{english\_proficiency} + (1 | \text{participant}) + (1 | \text{sentence})$
  - main effect of grammaticality ( $p < .001$ )
  - interaction between grammatical condition and English proficiency ( $p = .015$ )
-

# Adverb placement – modelling

grammaticality: — grammatical, — marked

- 
1. Project description
  2. Gradient acceptability
  3. Constructions under investigation
  4. Language attitudes
  5. Research questions
  6. Methods
  7. Results
  8. Discussion
-

## Discussion – RQ1

---

Do multilingual status and / or age affect the processing of ungrammaticality and markedness among L1 speakers of Polish?

- **influence of age on the ratings of ungrammatical**, but not marked constructions – **potential language change**
  - **absence of clear influence of English proficiency** as proxy for multilingual status on the ratings of ungrammatical (SO pronouns) or marked (adverb placement) constructions
  - **however**: young functionally monolingual adults have more frequent contact with other languages via the internet, especially social media, than older monolingual adults – **potential influence of multilingual status**
-

## Discussion – RQ2

---

Are multilingual status and / or age correlated with less prescriptively-oriented attitudes towards language?

- **multilingualism- and age-related increase in optionality** (Sorace, 2019) for sentences with pronouns
  - **more liberal attitudes** towards language related with **multilingual status** (e.g., Dewaele & Li, 2013) and **younger age**
-

## Conclusions

---

Future research:

- investigation of gradience in other languages (e.g., Norwegian)
  - more structured investigation of factors influencing ratings of ungrammatical and marked constructions in L1 (education level potentially correlated with multilingualism)
  - wider selection of constructions characterised by gradience (investigation of syntactic, semantic / pragmatic, and processing-based sources of gradience)
-
